

## CASE STUDY - Bolting/Screwing

### TASK TITLE: Bolting/Screwing

<b>Task Description:</b>	Bolting/screwing involves installing or removing nuts and bolts. These tasks can be done at a variety of heights and angles. Both hand and power tools are employed depending upon the task requirements.  Typical jobs in which bolting/screwing is performed include (not necessarily limited to): <ul style="list-style-type: none"><li>• assembly</li><li>• general maintenance</li></ul> Bolting/screwing may be performed on flat or upright surfaces directly on aircraft, equipment, benchtops, or on a variety of surface shapes.
<b>Job Performance Measures Most Often Impacted by Bolting/Screwing:</b>	<ul style="list-style-type: none"><li>• Consistent torque</li><li>• No errors (e.g. , missing bolts, incorrect bolts)</li><li>• Speed of completion of the job</li></ul>
<b>Typical Employee Comments about Bolting/Screwing:</b>	Employees typically report fatigue and discomfort in the hands/wrists/arms, shoulders/neck, and back/torso.  Primary: The primary body parts affected are the hands/wrists/arms and shoulders/neck Secondary: In some cases, the back/torso can also be affected
<b>Suggested Level II Analysis:</b>	Grip Force, Postural Analysis, Elemental Task Analysis
